Exercise 3: REACT NATIVE MESSAGES DIRECTORY

Submitted by: Saravanan Thiruvengadam (1340909)

GitHub URL: <https://github.com/achatessaran/MessageDirectoryApp>

Overview

MessageDirectoryApp is a React Native mobile application developed using Expo and JavaScript. The application allows users to browse important message directories and view stored messages within each directory.

Features

- Six message directories:
 1. You
 2. Home
 3. Love
 4. Family
 5. Friends
 6. School
- Colorful card-based user interface
- Directory icons and message counts
- View stored messages for each directory
- Back navigation to return to the home screen
- Search messages within a selected directory
- Responsive design for Android devices

Technologies Used

- React Native
- Expo
- JavaScript
- Android Studio
- Expo Router

Project Structure

MessageDirectoryApp/

```
├── app/
│   ├── (tabs)/
│   │   ├── index.tsx
│   │   └── _layout.tsx
│   ├── assets/
│   ├── images/
│   └── screenshots/
├── package.json
├── app.json
└── README.md
```

Installation and Execution

Prerequisites:

- Node.js
- npm
- Android Studio
- Android Emulator (Pixel 6 recommended)

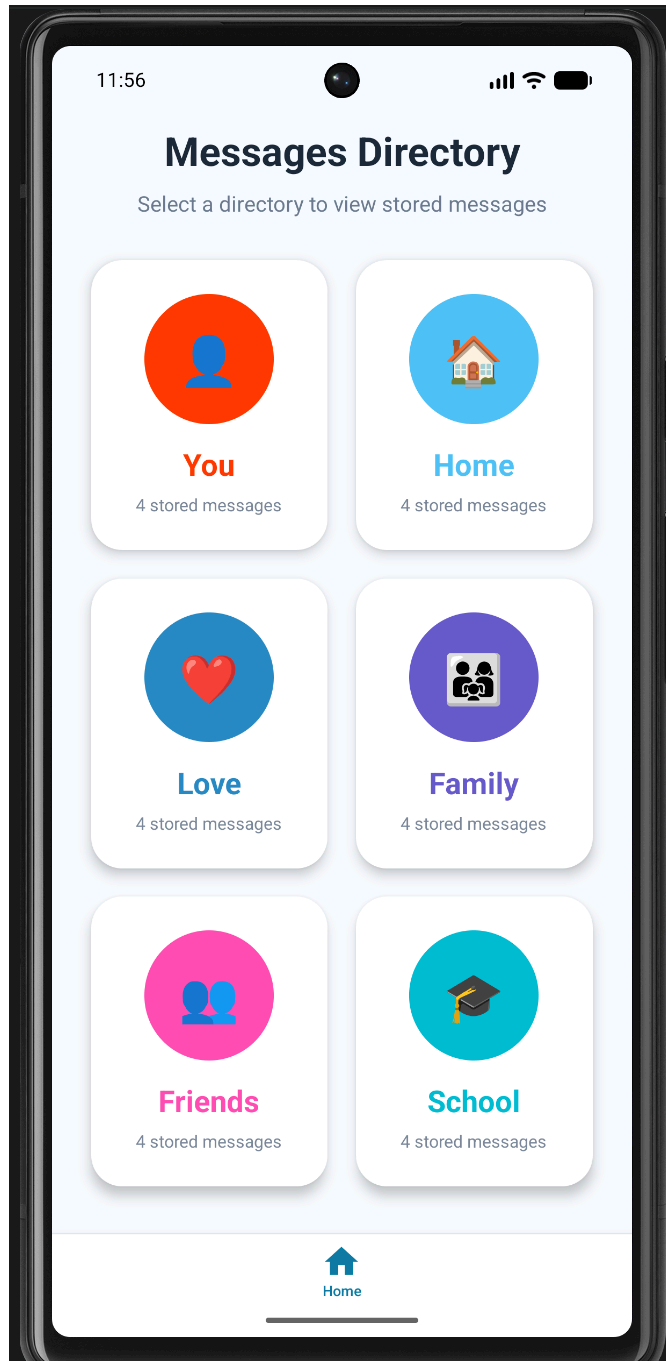

Steps:

1. Clone or download the project.
2. Navigate to the project directory where it was downloaded.
E.g., `cd MessageDirectoryApp`
3. Install dependencies using the below command in Terminal->Bash
`npm install`
4. Start the Android emulator (E.g., Pixel 6)
5. Run the application using the below command in Terminal->Bash
`npm run Android`

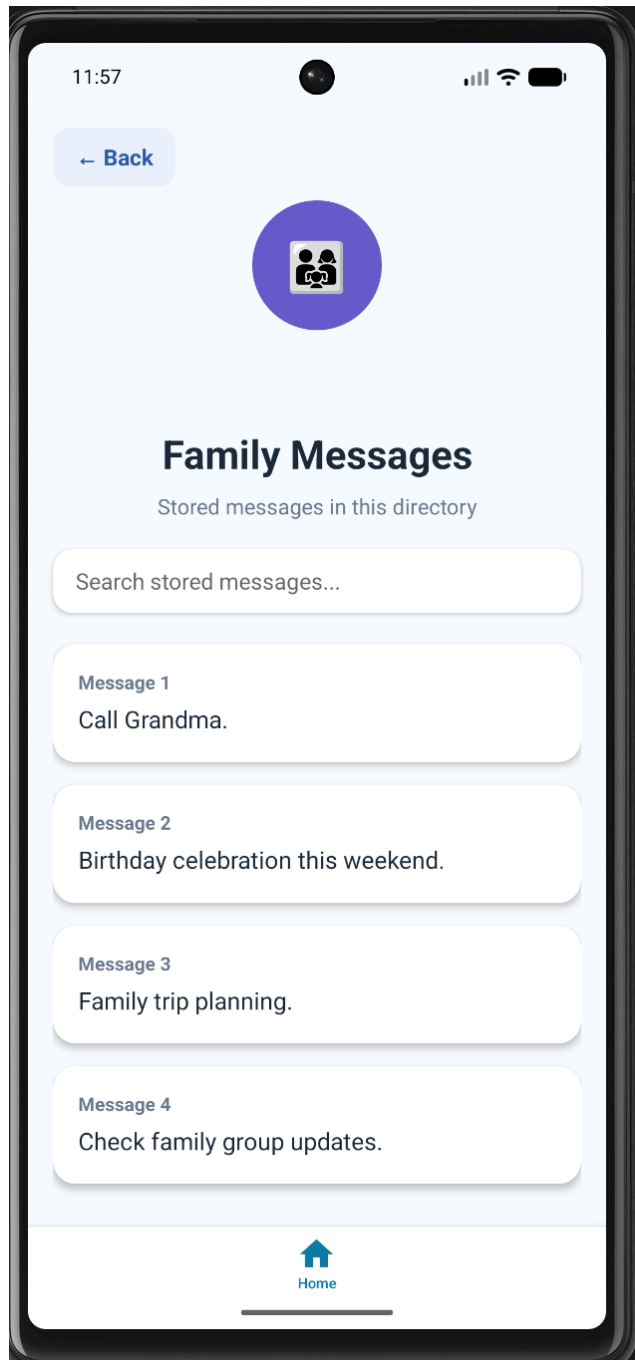

The application will launch on the Android emulator.

Screenshots

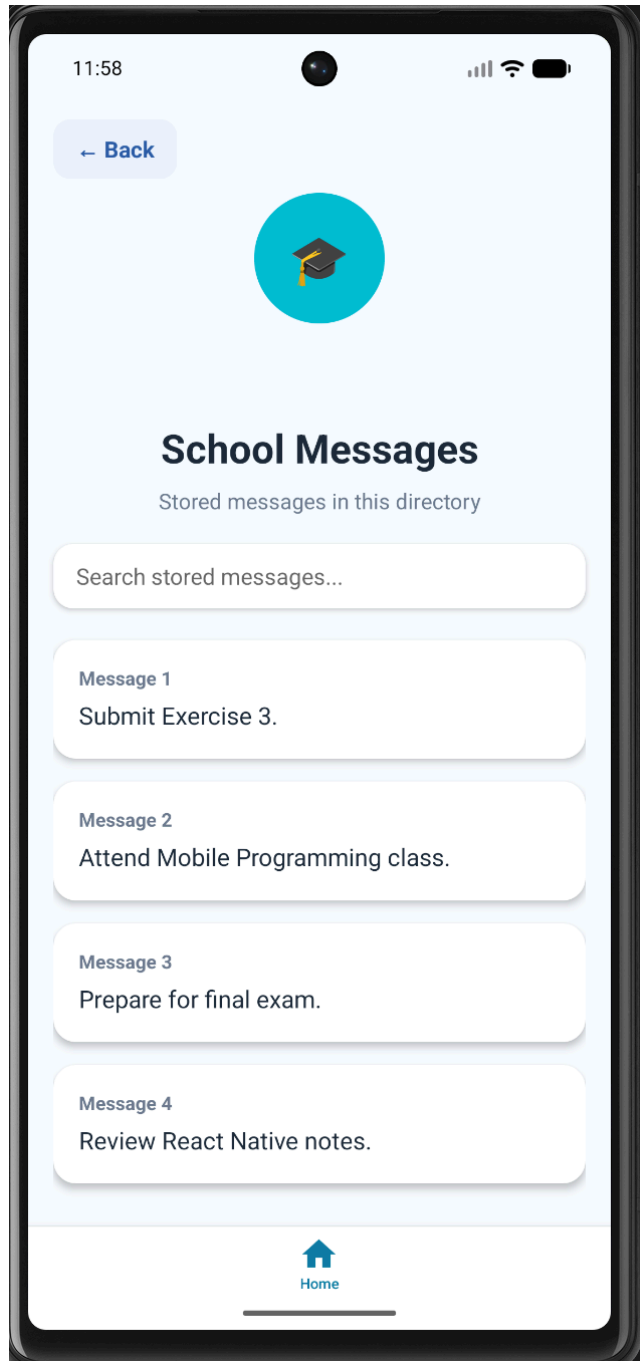

1) Home Screen

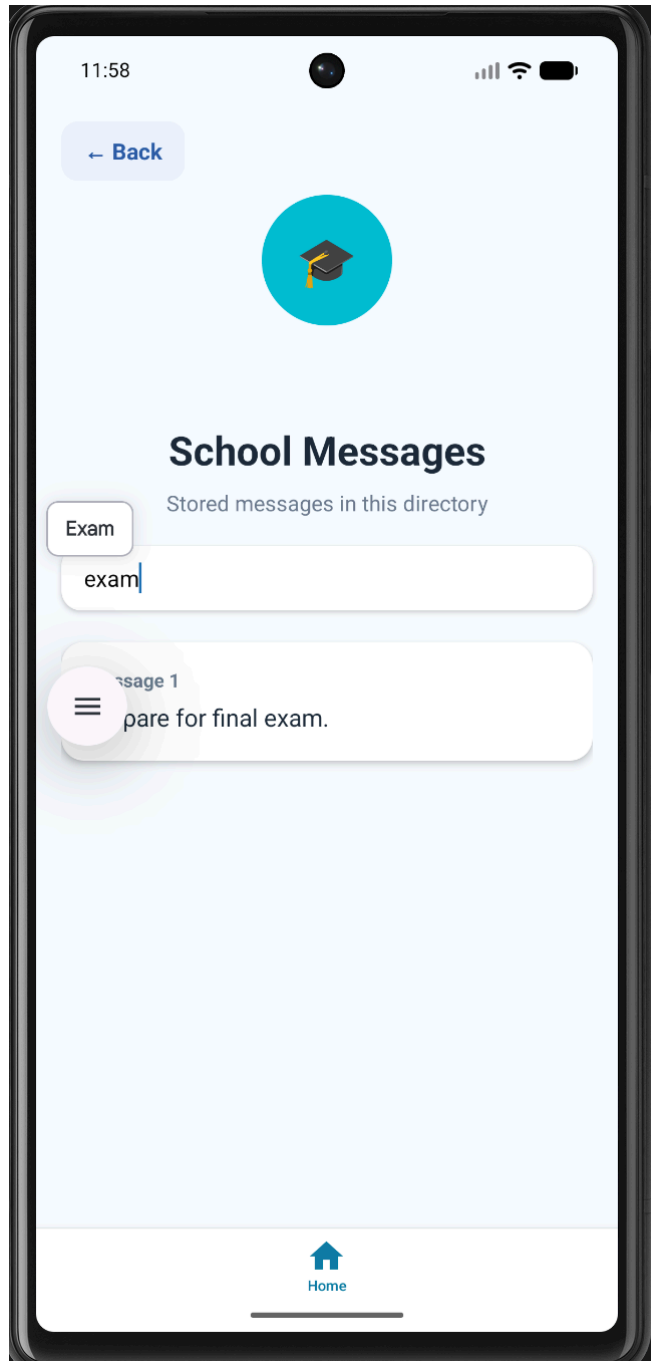

2) Family Messages Screen

3) School Messages Screen

4) Search Messages Feature

Conclusion:

This application satisfies the assignment requirements by displaying a list of important directories and allows users to click on any directory to view stored messages. Implemented additional functionalities like message searching feature and enhanced user interface design.
